<i>Yersinia pestis</i> murine toxin	Mouse	IV	10	

IV = intravenous; IP = intraperitoneal; SQ = subcutaneous

**Toxins in bold are Select Agent toxins.**

\* MLD = minimum lethal dose; lowest dose reported to kill at least one subject

\*\* Although DAS and T-2 toxins have LD<sub>50</sub> values >100 $\mu$ g/kg body weight, they must be registered as Acute Toxins with the Biosafety Office as they are Select Agent toxins.
